[1/5/2016 8:32:06 AM] Dr. Richard Alan Miller: 01-04-16

Gravity is also a di-polar force and its generation in both natural and "engineered" systems. It is a neutral potential in essence, the same as negative, neutral and positive electrical, magnetic and even mechanical forces, which reflects in their observation and descriptive math.

gravity is also a di-polar force and may be most directly observed & be most accurately described, understood and engineered in direct relation to the other well examined forces.

As a matter of fact, electrical and magnetic forces are little understood and it has been clearly demonstrated that they are all subject to the fact that without making a direct link to their manifestations with gravitational force, little more progress will be possible.

The realm of gravitational 'fields' or waves' and their relationship to the other "known" forces is real. Not only are they real but however they are related it will be revealed in the final analysis as:

"What we took to be 'indirect relationships' shall turn out to actually be primary relationships".

If you are interested, I find it quite fascinating that water is the
